Kidney Disease in UAE

Ministry of Health & Prevention

Statistics and Research Center

Prevalence of End Stage Renal Disease

End-Stage Renal Disease (ESRD) is a medical condition in which a person's kidneys cease functioning on a permanent basis leading to the need for a regular course of long-term dialysis or a kidney transplant to maintain life.

Worldwide:

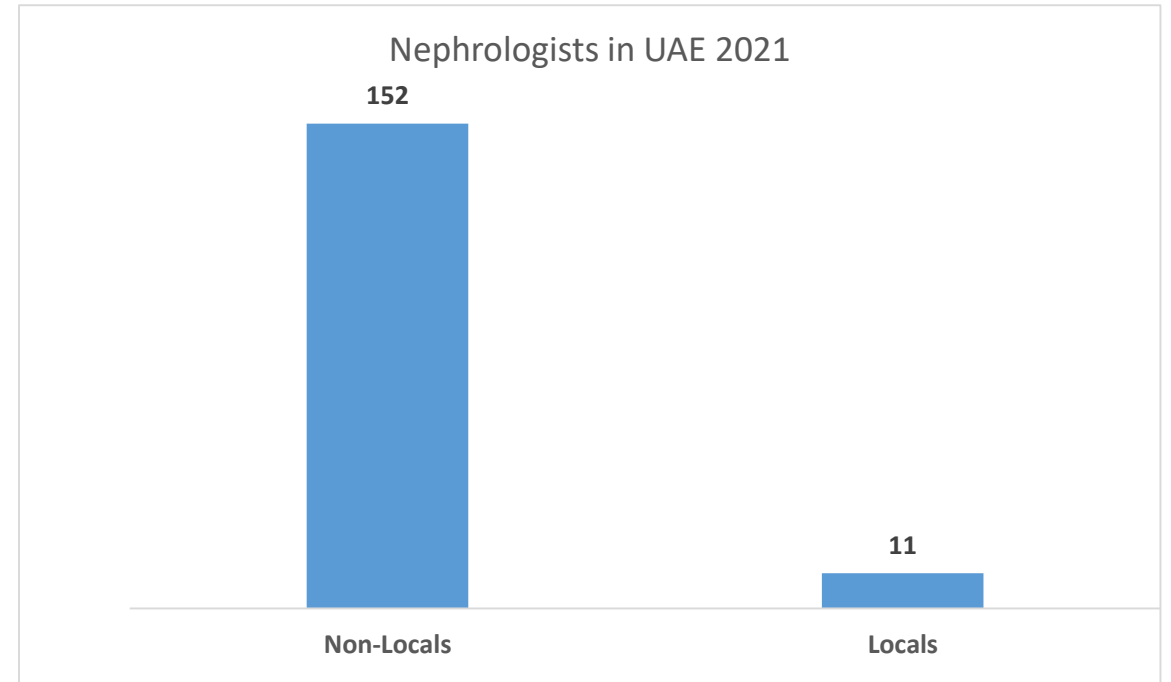

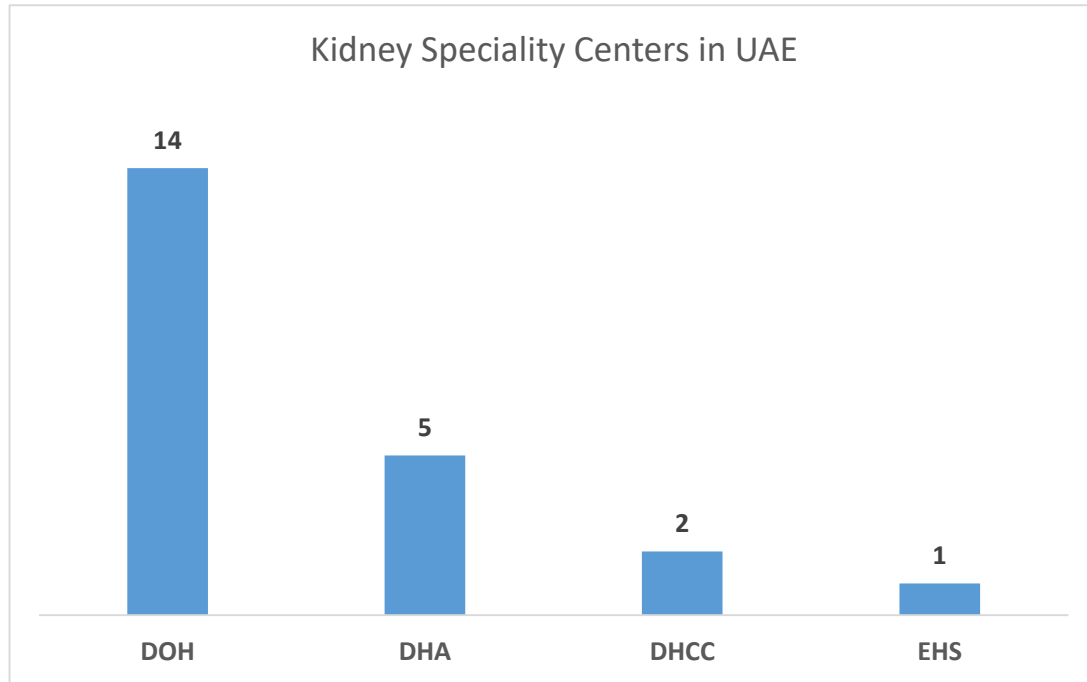

10% of the population worldwide is affected by chronic kidney disease (CKD), and millions die each year because they do not have access to affordable treatment.

United Arab Emirates:

In 2017, the prevalence of ESRD was reported 152 patients per million population per year.

Facilities and Man Power in UAE-2021

Number of estimated Visits for dialysis are approximately 502,419 in all health facilities of UAE and 17 cases were reported deceased due to Nephritis Nephrotic Syndrome & Nephrosis / renal diseases in 2020.
