Catalyzing Collaborative Health Research Projects

- Assist the researchers to work with their peers in the academic institutions and industry for active collaboration in various health research projects and clinical trials within the country and international level.
- Coordinate National Flagship Projects in Health Research & Clinical Trails

Talent and Excellence in the Health Research

- Building national expertise and capabilities in the field of health research.
- Help to form specialized professional networks to encourage teamwork spirit, improve research quality, and research field sustainability

Central Database for Researchers and Research in the UAE

- Construct a centralized and comprehensive database of researchers and health research in the country – searchable online.
- Create a user-friendly website for the National Center for Health Research

Translation Health Research Outcomes

Support and encourage projects and programs for translating health research outputs into economically applicable products (for example, equipment, devices, medicines, policies, services, or software development programs).
